

Name: Michele Calvello

Title: Associate Professor

Affiliation: University of Salerno (Italy)

Michele Calvello is Associate Professor in Geotechnical Engineering at the University of Salerno (Italy), where he currently teaches Soil mechanics and Landslide risk, respectively offered within the Bachelor Degree in Civil and Environmental Engineering and within the Master Degree in Environmental and Land Management Engineering. He graduated with honours in Civil Engineering from Università della Basilicata (Potenza, Italy) in 1997 and he earned a PhD degree from Northwestern University (Evanston, USA) in 2002, with a dissertation on 'Inverse analysis of a supported excavation through Chicago glacial clays'. His main research interests are focused on the engineering analysis of geotechnical boundary value problems and on the analysis and management of landslide risk, both at slope and regional scales, with special attention devoted to the following inter-disciplinary topics: early warning systems for rainfall-induced landslides, landslide zoning, risk perception, risk education and community resilience. He is currently a member of Technical Committees of the following international institutions: International School for PhD students LARAM 'Landslide Risk Assessment and Mitigation' (since 2005); TC-306 'Geo-Engineering Education' (since 2010) and TC-304 'Engineering Practice of Risk Assessment and Management' (since 2015) of the International Society of Soil Mechanics and Geotechnical Engineering; Joint Technical Committee on Education of the Federation of International Geo-engineering Societies (since 2015); Committee 'Dissemination of geotechnical culture' of the Italian Geotechnical Society. He has been serving as an Editorial Board Member for the following international journals: Rivista Italiana di Geotecnica, Planet@Risk, International Journal of Landslide and Environment. He is the author of over 80 scientific publications.
